Special Tests
- ABLB or Fowler: Tone alternating between Channel 1 and Channel 2: Channel 1 is 400 msec ON, 400 msec OFF followed by Channel 2, 400 msec ON, 400 msec OFF
- SISI: An intensity increment is added to a tone in the selected channel for 200 msec, every 5 seconds. The HL increments are in 1, 2 or 5 dB.
- High Frequency:* Pure tone testing in the frequency range of 8000 Hz to 20,000 Hz using circum-aural headphones.
- TEN: TEN masking noise will be presented to the test ear. Pure tone stimuli between 500 Hz and 4000 Hz may be used at 1, 2, or 5 dB increments to obtain TEN thresholds.
- QuickSIN: Six (6) sentences with five (5) key words per sentence are presented in four-talker babble noise. The sentences are presented at pre-recorded signal-to-noise ratios. The SNR’s used are 25, 20, 15, 10, 5, and 0.
- BKB-SIN: Contains 18 List Paris. The sentences are presented at pre-recorded signal-to-noise ratios that decrease in 3-dB steps. Each list in the pair is individually scored, and the results of the two lists are averaged to obtain the List Pair score. Results are compared to normative data to obtain the SNR Loss.

PC Enabled/Stand Alone

Communications and Monitoring
- Talk Forward: Permits the tester to speak through the examiner microphone into the selected transducer.
- Talk Back: Allows the examiner to listen to comments from the patient in the testing booth.
- Monitor: The monitor headset or monitor speaker built into the instrument housing may be used by the examiner to listen to Channel 1, Channel 2, Aux intercom, and/or Talk Back signals.
- Aux Intercom: The built-in Auxiliary Intercom and assistant headset allows the examiner to speak directly to an Assistant and allows the assistant to hear what is being presented to the patient.
- On-Board VRA Control: The built-in VRA controls facilitate fast and simple activation of VRA systems.
